- The replaceable filter is made by joining a specific urethane foam with refined, activated high absorption carbon.
- The fan is fully adjustable, quiet, and efficient.

ESD safe by design. The entire unit is processed with a non-sloughing static dissipative conductive material.

- In just seconds, the system is calibrated to operate within +/- 15°C (27°F)
- Even if you change temperatures, the system and tip stay in calibration
- When changing tips, the system will prompt the user to calibrate so you can always be sure your operating temperature meets your process specification, unlike other systems

INSTRUCTIONS FOR USE

The Glass cloth works best just slightly dampened with water. Either sprinkle water on the entire cloth or wet half the cloth. In most cases there is no need to wipe the surface dry after the cloth has been used, as evaporation enables surfaces to air-dry to a lint and streak-free shine. You can also spray water directly on the surface to be cleaned and wipe with a dry cloth.
(Note: if water marks appear, the cloth may have been too dirty or wet).

INSTRUCTIONS FOR CLEANING

To improve the lifespan of the Tergo cloths, it is necessary to wash them on a regular basis. For quick cleaning after use, simply hand wash in hot water, or use a very small amount of dish or laundry detergent. Do not use hand soap as it contains oil. Be sure to rinse well. Wash the cloths in the washing machine, when required, in hot water with your normal load. Either air or tumble-dry, up to 90 degrees. Do this when required or whenever the cloth looks soiled. Periodically boil the cloths in water for a few minutes on your stovetop. This disinfects and causes the fibers to swell releasing trapped grease and dirt. Tergo cloths can be machine washed over 600 times (lasting several years).

Important: The Tergo cloths should not be ironed, nor washed with conditioner/fabric softener or dryer softener sheets, as it would reduce the cloth's static electricity! (Boil the cloth to remove any residue, if fabric softener is used). Avoid washing in a load with terry towels, unless you put them in a mesh bag for delicates to prevent lint build up. The cloth should not be used with stainable materials such as paints and inks. It's best to use enviro-safe detergent if possible. DO NOT USE CHLORINE BLEACH or abrasive solutions for cleaning or washing. This will shorten the life span of the cloth.

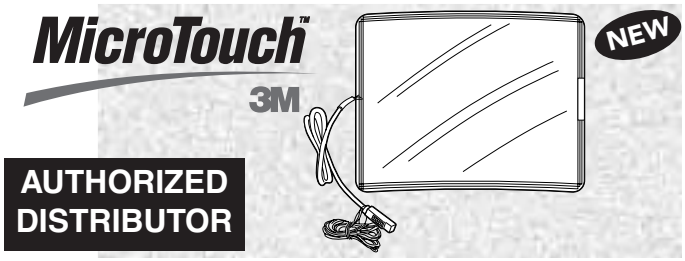
MICROTOUCH TOUCH SCREENS

Extended Durability for High-use Applications

MicroTouch™ ClearTek™ capacitive touch screens, manufactured by 3M Touch Systems, are the preferred touch solution for applications that require fast and accurate touch performance. The flat capacitive Profile sensor incorporates advanced construction and production techniques that result in a thin, sleek design which provides easy installation into flat panel displays and flat CRTs. The robust touch characteristics of ClearTek are attributed to its transparent overcoat, which significantly increases the physical durability of the surface by allowing it to resist scratches and abrasions. Popular applications include kiosks, ATM installations, point-of-sale, industrial equipment, gaming machines, and vending.

Making the Difference

ClearTek capacitive touch technology provides accurate and sensitive response to the user's touch while offering outstanding durability. A ClearTek capacitive touch screen provides scratch-resistance and contaminant-resistance to dirt, liquids, and harsh chemicals. A ClearTek sensor with Industrial Etch has been tested in a laboratory environment to withstand over 225 million mechanical touches without noticeable degradation to the surface.



Features

- Transparent coating significantly increases durability by resisting scratches and abrasions
- Performance unaffected by everyday contaminants in the environment
- Accurate and fast touch response
- Narrow border for easy integration
- Connects to the new EX II electronics platform
- ClearTek capacitive touch screens available in both flat and curved

AZKOYEN HOPPER

The **AZKOYEN HOPPER "E"** can be used in the majority of change or coin / token pay out applications since it is not coin specific and has features and options that make it very versatile.

- Available in 12vdc or 24vdc
- Normal hopper or natural overflow, that avoids sophisticated software to control the hopper overflow (this overflow level could be customized).
- High level switch to detect, working on a weight principle, when the hopper is full and to report back to the machine software so it can route the excess coins into the cashbox. This level is adjustable with a screw.
- Low level switch for empty hopper detection
- Two hoppers can be linked together to operate side by side for greater capacity in large pay out applications or to offer twin denomination pay out capability.
- Optical switch coin counting with a special feature that warranties a minimum pulse length of 18 milliseconds, avoiding special software treatment of the holes in coins or tokens.
- Pay out rate approximately 3 or 4 coins per second
- White disc

HAPP CONTROLS ELECTRIC COIN SORTER, COUNTER, WRAPPER & BAGGER

The ultimate machine that sorts, counts, wraps or bags all coin or token denominations. It even handles the new Golden Dollar. Pour unsorted mixed coins into the large tray, set the controls and insert a bank wrapper in the wrapping tube. When you press the "start" button, it will count and wrap the coin with the largest diameter while at the same time sort away all other coins into a sort-bag or tray at the side. It automatically stops when each wrapper is filled with the proper number of coins. When you finish wrapping the largest coin, pour the coins from the sort-bag back into the tray, set the controls for the largest diameter coin remaining in the mix and repeat the counting and wrapping process. In just a few minutes all denominations will have been sorted, counted and wrapped. Will also count and bag coins instead of wrapping them. Just replace the wrapping tube with the bag tube at the front. The resettable electronic meter will tell you the number of coins that have been counted into the bag.

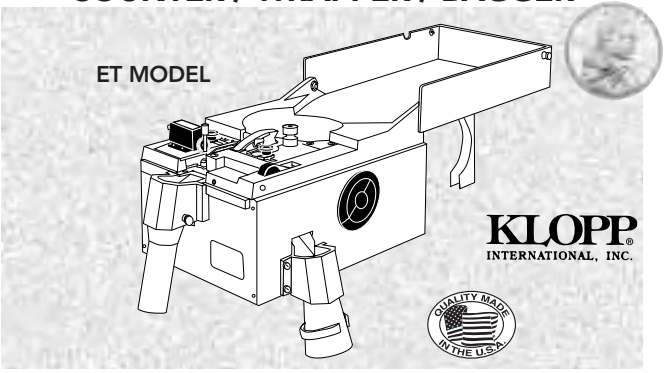
KLOPP COIN COUNTERS / WRAPPERS AND SORTERS

Since 1931, Klopp has been a U. S. manufacturer of high quality, economically priced coin handling equipment. Their superb reputation for accuracy, rugged dependability and almost no breakdowns has been justifiably earned through the test of time. Their products are made in the USA.of cast aluminum and hardened steel. This means long life and minimal service. Klopp products are covered by a one year factory warranty on both parts and labor.

Here's how Klopp Coin Counter / Wrappers and Sorters benefit you:

- Eliminate 70% of the time now being spent to count and wrap coins by hand or with a plastic slide.
- Cut labor costs of coin processing by providing fast and accurate counts the first time.
- Eliminate human error caused by interruptions since the Klopp does the counting, not the operator.
- Speed bank deposit preparation.

KLOPP MODEL ET ELECTRIC SORTER / COUNTER / WRAPPER / BAGGER



The "Everything Machine" sorts, counts, wraps or bags all coin or token denominations. Pour unsorted mixed coins into the large tray, set the controls and insert a bank wrapper in the wrapping tube. When you turn the unit on, it will count and wrap the coin with the largest diameter while at the same time sort away all other coins into a sort-bag at the side. The ET automatically stops when each wrapper is filled with the proper number of coins. When you finish wrapping the largest coin, pour the coins from the sort-bag back into the tray, set the controls for the largest diameter coin remaining in the mix and repeat the counting and wrapping process. In just a few minutes all denominations will have been sorted, counted and wrapped. The ET will also count and bag coins instead of wrapping them. Just replace the wrapping tube with an optional bag tube at the front. The resettable meter will tell you the number of coins that have been counted into the bag. The New Color of Money: Safer, Smarter, More Secure.

- U.S. Treasury and Federal Reserve Released the Redesigned $20 Notes on October 9, 2003

- In an effort to stay ahead of counterfeiting, the U.S. Department of the Treasury's Bureau of Engraving and Printing and the Federal Reserve System introduced the newly redesigned currency on October 9, 2003. The newly redesigned bills are safer, smarter and more secure and include enhanced security features and other new designs that help deter counterfeiting and protect your hard-earned money. For the first time in recent history, the newly redesigned currency includes a subtle introduction of color, which will make it more burdensome to counterfeit and make it easier to distinguish denominations.

- Circulation of the new series began on October 9, 2003 with the issuance of the redesigned $20 note. New designs for the $50 and $100 notes will follow in 2004 and 2005. The redesign of the $10 and $5 notes is still under consideration, but a redesign of the $2 and $1 notes is not planned.

- You can bank on Happ Controls to keep you up to date on all the latest currency changes. Happ Controls will be able to supply you with all the latest software and EPROM upgrades. Call your sales representative today.

RS232 BILL VALIDATOR SOLUTIONS

RS232 BILL VALIDATOR INTEGRATION DEVELOPERS KIT

- A complete hardware and software system to connect a MEI Serial Compatible (NISR) bill validator to a PC serial port
- Software DLL for Windows 9x/NT4.0 makes interfacing to a bill validator quick and easy. NISR DLL handles all low-level communications with the bill validator, removing the programmer from the intricate details of the communication protocol. This allows the programmer to focus on application development rather than communications, speeding time to market. Utilizes the industry standard MEI Serial (NISR) communication protocol.
- Allows all bill validator functions to be accessed by your application, including bill validator enable/disable, bill accept/reject, and denomination enable/disable. NISR DLL also supports all bill validator fault codes and is compatible with both C and Visual Basic programming languages.
- The hardware interface board is small, quick to install, and requires no tools. Simply plug the board into the bill validator, connect the cable to the interface board and PC and installation is complete. The interface is powered directly by the bill validator, so no external power supply is needed
- NISR DLL supports MEI AE2600, LE3000, and GL Series bill validators with the MEI Serial protocol. Support for MEI VN2500, LE3000, GL, and CashCode 1100 and HRT models coming soon
- Hardware supports MEI AE2600 and CashCode 1100 UNV and HRT model bill validators, with MEI LE3000/GL styles coming soon
- Kit includes:
  - 3-1/2" Floppy disk containing application and source code
  - Bill Validator hardware interface board
  - Serial cable
  - Manual

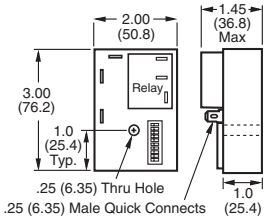
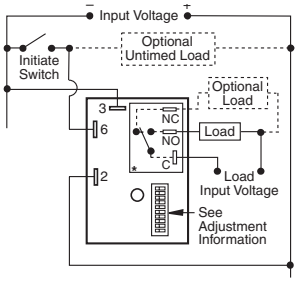
Mounting Dimensions



Isolated Output



With 30 ampres of switching capacity, it allows direct coin operated control of loads like compressors, pumps, motors, heaters and lighting.

This accumulating coin vending timer will count each closure of the initiate switch. When the total number of initiate switch closures equals the number to start set on the lower 3 DIP switches, the load is energized and the vending time is started. For every initiate switch closure, the accumulating coin vending timer adds one time per coin period, as set on the upper 7 DIP switches, to the total vending time.

Microcomputer accuracy, combined with a power relay, makes the Coin Vending Timer ideal for cost-sensitive single coin or token vending machines.

BET YOU A WET DOLLAR IT WILL WORK IN YOUR GAME.

MEI series 2000 bill acceptors. Wet bill acceptance and a proven track record of reliability, means you win every time.

Our competition just can't beat our proven track record. MEI surpassed the industry's five-year economic life for bill acceptors with the Series 2000. Over 1,000,000 have been in the field for over six years, and still continue to perform to their original design specifications with less than a two percent annualized failure rate.

From wet bill acceptance and fewer jams to higher security than the competition's bill acceptors, only MEI has the experience and the proven technology to give you what your site demands. Even small details such as user friendly arrows and indicator lights make it easier for customers to play your games. And with the reliability of the MEI series 2000, your machines are up and running—which means lower downtime and more revenue for you.

Stay ahead of the game with MEI.
